

If you are having trouble getting web based video and audio to play in Windows Media Player, try changing this setting:

Open Windows Media Player.

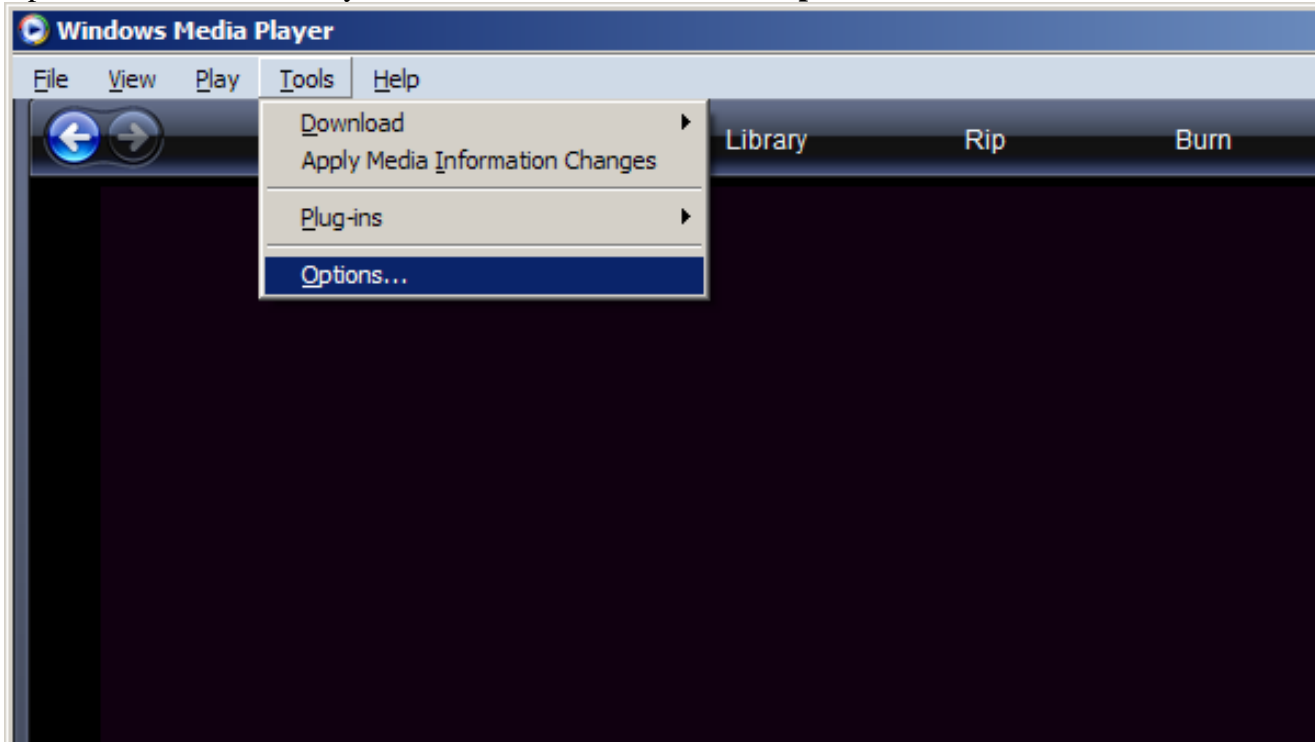

Tools>Options

Player Tab>Connect to the Internet (overrides other commands)

Note: This is a profile setting that must be changed for each user.

Screen captures are on the next page

Open Windows Media Player. Click on **Tools** then click on **Options**

Go to the Player Tab>Click in the box that says Connect to the Internet (overrides other commands)

It should have a check mark in the box now. Click on Apply and then click OK.
